Speed With the advent of the 3D graphics standard called VRML, AutoCAD has become one of the most powerful and convenient 3D CAD programs available. But even in 2D mode, AutoCAD is capable of generating drawings of great accuracy and precision. While other CAD programs are very slow when processing a new file, AutoCAD is capable of processing a new file every few seconds, even on a single-processor machine. AutoCAD also runs very fast in batch mode. With the advent of the 3D graphics standard called VRML, AutoCAD has become one of the most powerful and convenient 3D CAD programs available. Some professional users will

work on a drawing as large as 2.5 GB. With one complete install, the AutoCAD software package can occupy a drive as much as 250 MB. The user can save drawings as large as 4.2 GB. Graphical user interfaces (GUI) for AutoCAD are also provided by third parties. For instance, there are interfaces for AutoCAD and Architectural Desktop. There are a number of different AutoCAD plugins available for Mac OS X. An example is EZDraw, which uses Automator to convert DWG, DXF and PDF files to SVG. Third-party software for modeling In addition to AutoCAD, there are other CAD applications available. These include CATIA, NX, SolidWorks, TurboCAD and others. See also Draw Computer-aided design

Exogenous methyl jasmonate (MeJA) induces the production of defense proteins by plants and triggers the degradation of jasmonic acid-insensitive 2 (jai 2) and jasmonate-insensitive1 (jin1) in jasmonate signaling. These two genes encode protein kinase B (PKB/AKT), an important Ser/Thr protein kinase that plays an important role in the signal transduction pathway of the plant responses to abiotic and biotic stress. In order to study the effects of MeJA on the degradation of jai 2 and jin 1, we isolated a yeast mutant, HAY61, that is sensitive to exogenous MeJA. In HAY61, jai 2 and jin 1 gene expressions were not induced after MeJA treatment.

Although treatment with MeJA did not induce expression of the jai 2 and jin 1 genes in HAY61, the degradation of jai 2 and jin 1 was significantly impaired compared with HAY73, in which they were degraded normally. Thus, we suggest that in yeast, jai 2 and j
